

IMSONline : Naloxone recording module

Changes in UK legislation mean that from October 2015 persons employed or engaged in the provision of drug treatment services can supply naloxone.

IMSONline now has an additional module which allows you to record when a Naloxone kit has been issued. This quick guide highlights some of the new features of the naloxone recording module. If you have any comments, questions or feedback please contact us CPHmonitoring@ljmu.ac.uk.
